Ti*k*Z reference

Yi-Chen Zhang

January 5, 2018

The Ti*k*Z commands can be inside the environment \begin{tikzpicture} . . . \end{tikzpicture} or simply use \tikz clause. We run **pdflatex** or **latex** followed by **dvips** to execute the Ti*k*Z commends.
1 Preliminary

1.1 Straight Path Construction

```
Useage:
  \draw[options] (x1,y1) -- (x2,y2) -- (x3,y3);

Example:
  \begin{tikzpicture}
    \draw (-1.5,0) -- (1.5,0) -- (0,-1.5) -- (0,1.5);
    \draw[thick, rounded corners=10pt] (0,0) -- (0,2) -- (1,3.25) --
    (2,2) -- (2,0) -- (0,2) -- (2,2) -- (0,0) -- (2,0);
  \end{tikzpicture}
```

1.2 Circle Path Construction

```
Usage:
  \draw[options] (x,y) circle (raidus);
  \draw[options] (x,y) ellipse (x.raidus anda y.radius);

Example:
  \begin{tikzpicture}
    \draw (0,0) circle (2pt);
    \draw[red] (1,0) circle (3pt);
    \draw[fill=red] (2,0) circle (4pt);
    \draw[red,fill=red] (3,0) ellipse (10pt and 5pt);
    \filldraw[blue,rotate=30] (3.5,-2) ellipse (10pt and 5pt); % another way
  \end{tikzpicture}
```
1.3 Curved Path Construction

Usage:
```
\draw[options] (x1,y1) .. controls (x2,y2) and (x3,y3) .. (x4,y4);
```

Example:
```
\begin{tikzpicture}
  \filldraw[gray] (0,0) circle (2pt) (1,1) circle (2pt)
                  (2,1) circle (2pt) (2,0) circle (2pt);
  \draw (0,0) .. controls (1,1) and (2,1) .. (2,0);
\end{tikzpicture}
```
1.4 Rectangle Path Construction

Usage:
```
\draw[options] (x1,y1) rectangle (x2,y2);
```

Example:
```
\begin{tikzpicture}
  \draw (-1.5,0) -- (1.5,0);
  \draw (0,-1.5) -- (0,1.5);
  \draw[rotate=30, fill=red] (-0.5,-0.5) rectangle (-1,-1);
\end{tikzpicture}
```

1.5 Grid Path Construction

Usage:
```
\draw[options] (x1,y1) grid (x2,y2);
```
Example:
```
\begin{tikzpicture}
  \draw[step=.5cm, gray, very thin] (-1.4,-1.4) grid (1.4,1.4);
  \draw (-1.5,0) -- (1.5,0);
  \draw (0,-1.5) -- (0,1.5);
  \draw (0,0) circle (1cm);
  \draw[step=2pt] (0,0) grid (10pt,10pt);
\end{tikzpicture}
```
1.6 Drawing Options

There are some drawing options that one can use to control the color, thickness, and line type.
- color: blue ■, black ■, brown ■, cyan ■, gray ■, green ■, lightgray ■, lime ■, magenta ■, orange ■, pink ■, purple ■, red ■, yellow ■, teal ■, violet ■, white ▭.
  Note: Colors can also be mixed. The color [blue!40!white] means 40% blue and 60% white mixed together.

- thickness: ultra thin —, very thin —, thin —, semithick —, thick —, very thick —, ultra thick —.
  Note: [help lines]=[gray,very thin]. Line thickness can be also specified by [line width] option, say [line width=0.5cm].

- line type: loosely dashed - -, dashed --, densely dashed ---, loosely dotted ···, dotted ·····, densely dotted ·······.

- arrow: <- ←, <<- ←, <-| ←|, <<-| ←|, -> →, ->> →», |-> ↦, |->> ↦», <-> ↔, <<->> ←→».
  Note: You can also add >=stealth in the options, which changes the arrow to 'stealth-like' style.

Usage:
```
\draw[color, thickness, line type, arrow] (x1,y1) -- (x2,y2);
```

Example:
```
\begin{tikzpicture}
  \draw[red, very thin, densely dashed, <-] (0,0) -- (0.9,0);
  \draw[green, ultra thick, loosely dotted, |->] (1.1,0) -- (1.9,0);
  \draw[blue, semithick, <->, >=stealth] (2.1,0) -- (2.9,0);
  \draw[purple, line width=0.3cm] (3.1,0) -- (3.9,0);
\end{tikzpicture}
```
1.7 Arc Path Construction

Usage:
```
\draw (x,y) arc (angle1:angle2:radius);
\draw[start angle=angle1, end angle=angle2, radius=radius] (x,y) arc;
\draw (x,y) arc (angle1:angle2:x.radius and y.radius);
```

Example:
```
\begin{tikzpicture}
```

```
  \draw (-1.5,0) -- (1.5,0);
  \draw (0,-1.5) -- (0,1.5);
  \draw (0.5,0) arc (0:120:0.5cm);
  \draw (1,0) arc (0:315:1.75cm and 1cm);
  \draw[start angle=180, end angle=120, radius=0.5cm] (-1,0) arc;
  % The above is not a recommand way.
\end{tikzpicture}
```
1.8 Adding a Touch Style

Styles are predefined sets of options that can be used to organize how a graphic is drawn. To define a style globally, we can use the \tikzset command at the beginning of the document.

```
Usage:
  \tikzset{style_name./style={options}}
```

```
Example:
  \tikzset{blue_thin_lines/.style={color=blue!50,very thin}}
  \begin{tikzpicture}
    \draw[blue_thin_lines] (0,0) grid (5,5);
  \end{tikzpicture}
```
To define a style locally, we use a pair of square bracket "[ ]" to define styles at the beginning of a picture.

```
Usage:
  [style_name/.style={options}]
```

```
Example:
  \begin{tikzpicture}
    [red_thick_lines/.style={color=red!50,very thick}];
    \draw[step=0.5cm, red_thick_lines] (0,0) grid (2,2);
  \end{tikzpicture}
```

One can also define styles hierarchically.

Usage:
```
  \tikzset{style_name1/.style={style_name2, options}}
```

Example:
```
  \tikzset{green_help_lines/.style={help lines, color=green!90}}
  \begin{tikzpicture}
    \draw[step=0.5cm, green_help_lines] (0,0) grid (5,5);
  \end{tikzpicture}
```

Styles can also be used with a parameter.

Usage:
```
  [style_name/.style={options}, style_name/.default={options}]
```

Example:
```
  \begin{tikzpicture}
    [para_color/.style={help lines,color=#1!50}, para_color/.default=blue]
    \draw[step=0.5cm, para_color] (0,0) grid (2,2);
    \draw[step=0.5cm, para_color=red] (2,0) grid (4,2);
  \end{tikzpicture}
```

1.9   Clipping a Path

The \clip command clip all subsequent drawing.

Usage:
```
  \clip[options] (x1,y1) rectangle (x2,y2);
```

Example:
```
  \begin{tikzpicture}[scale=3]
    \clip (-0.1,-0.2) rectangle (1.1,0.75);
    \draw[step=.5cm, help lines] (-1.4,-1.4) grid (1.4,1.4);
    \draw (-1.5,0) -- (1.5,0);
    \draw (0,-1.5) -- (0,1.5);
    \draw (0,0) circle (1cm);
    \draw (3mm,0mm) arc (0:30:3mm);
  \end{tikzpicture}
```
Usage:
```
\clip (x1,y1) circle (radius);
```

Example:
```
\begin{tikzpicture}[scale=3]
  \clip[draw] (0.5,0.5) circle (.6cm);
  \draw[step=.5cm, help lines] (-1.4,-1.4) grid (1.4,1.4);
  \draw (-1.5,0) -- (1.5,0);
  \draw (0,-1.5) -- (0,1.5);
  \draw (0,0) circle (1cm);
  \draw (3mm,0mm) arc (0:30:3mm);
\end{tikzpicture}
```
1.10   Parabola Path Construction

Usage:
```
\draw[options] (x1,y1) parabola (x2,y2);
```

Example:
```
\begin{tikzpicture}[scale=3]
  \draw (0,0) rectangle (1,1) (0,0) parabola (1,1);
\end{tikzpicture}
```

Usage:
```
\draw[options] (x1,y1) parabola bend (x2,y2) (x3,y3);
```

Example:
```
\begin{tikzpicture}
  \draw[x=0.2cm,y=0.2cm] (0,0) parabola bend (4,10) (6,6);
\end{tikzpicture}
```
1.11 Sine and Cosine Path Construction

Usage:
```
\draw[options] (x1,y1) sin (x2,y2);
\draw[options] (x1,y1) cos (x2,y2);
```

Example:
```
\begin{tikzpicture}
  \draw[help lines] (-0.5,-1.5) grid (4.5,1.5);
  \draw[red] (0,0) sin (1,1) cos (2,0) sin (3,-1) cos (4,0);
  \draw[blue] (0,1) cos (1,0) sin (2,-1) cos (3,0) sin (4,1);
\end{tikzpicture}
```

1.12 Filling and Drawing

Usage:
```
\fill[options] (x1,y1) -- (x2,y2) arc (angle1:angle2:radius) -- (x3,y3);
\fill[options] (x1,y1) -- (x2,y2) arc (angle1:angle2:radius) -- cycle; % better
\filldraw[options] (x1,y1) -- (x2,y2) arc (angle1:angle2:radius) -- cycle;
```

Example:
```
\begin{tikzpicture}[line width=5pt]
  \fill[blue!80] (0,0) -- (3,0) arc (0:30:2) -- (0,0);
  \draw (4,0) -- (5,0) -- (5,1) -- (4,0);
  \draw (6,0) -- (7,0) -- (7,1) -- cycle;
  \filldraw[fill=green!20!white, draw=green!50!black]
    (8,0) -- (11,0) arc (0:45:3) -- cycle;
\end{tikzpicture}
```

1.13 Shading
